 - [Why do I get "java no match" error when running the ClockSource or EventPrinter?](#)

2. Answers

2.1. 1. Programming Solar

2.1.1. 1.1. Can I still create an empty events and then add attributes?

No, events are made immutable now. You have to create a list of attributes then create a new event with that list.

2.2. 2. Running Solar

2.2.1. 2.1. Why do I get "java no match" error when running the ClockSource or EventPrinter?

If you use command line option for names/queries, you may need to put quotes around it such as: `java solar.test.ClockSource -host tahoe -name "[source=clock]"`.
