

# Rendering Algorithms

---

Addison Wessel, Clay Foye

# Implemented Features

---

- ❖ Normal / Bump Mapping
- ❖ Volumetrics
  - Homogenous
  - Heterogeneous
- ❖ Emission Textures
- ❖ Metropolis Light Transport (PSSMLT)

# Normal Mapping

---

- ONB  $\rightarrow$  World transform
- Mapping .png to Vec3f

# Volumetrics: Homogeneous

- Probabilistic Medium Interactions
- Media on Rays, not volumes
- Atmospheric or bounded
- Using Material interface

# Boundary

# Atmospheric

# Volumetrics: Heterogeneous

- Uses tiled 3d precomputed values from texture
- Allows for use of procedural fog with lower cost

0.789	0.039	0.475	0.107
0.605	0.719	0.875	0.906
0.765	0.348	0.715	0.342
0.228	0.660	0.913	0.852

# Proof of equality

# Heterogeneous

# Volumetric Caustic

# Emission Textures

- ❖ Mapping Albedo to Emission

# Metropolis Light Transport

---

- ❖ Implemented PSSMLT (Primary Sample Space)
  - Kelemen et al., “A Simple and Robust Mutation Strategy for the Metropolis Light Transport Algorithm”
  - Metropolis Sampler using PBRT implementation
    - Metropolis sampling generates sampling according to a distribution
  - PSSMLT treats scene as a black box, differs from Veach’s
- ❖ Built on uni-directional MIS

3000 mpp, 7 bounces

100 spp, 64 bounces
